S/N: 09/777,950 Art Unit: 2625

- c) computing a surround red response, a surround green response and a surround yellow response based on said images;
- d) computing a red, a green and a blue on-center opponent and filtered opponent response, based on said center and surround responses;
- e) computing a red, a green and a yellow off-center opponent and filtered opponent response based on said center and surround responses;
- f) computing a red, a green and a blue double-opponent response (do-response) and a corresponding filtered double-opponent response based on said oncenter and off-center filtered opponent responses;
- g) computing a red, a green and a blue do-remote <u>response</u> [signal] based on a set of responses selected from the group consisting of said on-center filtered opponent responses and said filtered double-opponent responses; and
- h) for each pixel: correcting each of said red, green, and blue double-opponent responses for color contrast using respectively said red, green and blue do-remote response [signals], thereby producing corrected red, green and blue double-opponent responses.
- 9. (Amended) The method of claim 7 [1], wherein said step of computing each said double-opponent surround response includes convolving a surround filtered response with a surround spatial weight function.
- 14. (Amended) The method of claim $\underline{2}$ [1], wherein said step of correcting each of said red, green, and blue double-opponent responses for color contrast includes the steps of: for each said double-opponent response
 - a) computing a respective adaptive function Gb; and
- b) computing a respective adaptation factor, based on said respective adaptive function.

Art Unit: 2625

- 29. (Amended) The method of claim 28, wherein said inversely transforming includes transforming said new <u>center [double-opponent cell]</u> responses into new opponent cell responses.
- 31. (Cancelled)
- 32. (Cancelled)
- 33. (Amended) A method for adjusting an achromatic contrast of a scene, the scene including an intensity spectrum at each of a plurality of pixels, the method comprising the steps of:
- a) providing an image that has an intensity value at each of the plurality of pixels;
- b) obtaining an adapted opponent center response using a plurality of said pixel intensity values by:
 - i) calculating an opponent center response;
 - ii) providing a center adaptation factor that includes a remote center adaptation term, and
 - iii) combining said opponent center response and said center adaptation factor; and
- c) at each pixel, correcting the achromatic contrast using said adapted opponent center response.
- 35. (Amended) The method of claim 33 [32], further comprising obtaining an adapted opponent surround response, wherein said step of correcting for achromatic

[intensity] contrast includes subtracting said adapted opponent surround response from said adapted opponent center response.

- 39. (Amended) The method of claim 33 [31], wherein said step of providing pixel intensity values includes: at each pixel: i) multiplying the intensity spectrum by a spectral response function, thereby providing a spectral product; and ii) integrating said spectral product.
- 40. (Amended). The method of claim 33, wherein said step of obtaining an <u>adapted opponent</u> center response includes convolving each said pixel intensity value with a center spatial weight function.
